

CSS Flexbox — MCQ Practice Question Bank

Friday Test Preparation • Parts 7, 8 and 9 removed as requested

Part 1 — Flexbox Fundamentals

1. Which CSS property is used to make an element a flex container?

- A. flex
- B. display: flex
- C. position: flex
- D. flex-container: true

Answer: B

Explanation: display: flex turns an element into a flex container.

2. What are the direct children of a flex container called?

- A. Flex boxes
- B. Flex elements
- C. Flex items
- D. Flex nodes

Answer: C

Explanation: Direct children of a flex container are flex items.

3. Which property defines the direction of flex items?

- A. flex-direction
- B. direction
- C. flex-flow
- D. item-direction

Answer: A

4. What is the default value of flex-direction?

- A. column
- B. row
- C. row-reverse
- D. column-reverse

Answer: B

5. Given display: flex; how will the children be arranged by default?

- A. Vertically
- B. Horizontally
- C. Randomly
- D. In a grid

Answer: B

6. Which value makes flex items appear vertically from top to bottom?

- A. row
- B. column
- C. vertical
- D. column-reverse

Answer: B

7. What does row-reverse do?

- A. Arranges items vertically
- B. Arranges items horizontally in reverse order
- C. Reverses the container itself
- D. Creates two rows

Answer: B

8. What does column-reverse do?

- A. Arranges items vertically in reverse order
- B. Arranges items horizontally
- C. Creates reverse columns
- D. Changes the main axis

Answer: A

Part 2 — Main Axis and Cross Axis

9. In flex-direction: row, what is the main axis?

- A. Vertical
- B. Horizontal
- C. Diagonal
- D. None

Answer: B

10. In flex-direction: column, what is the main axis?

- A. Horizontal
- B. Vertical
- C. Diagonal
- D. None

Answer: B

11. In flex-direction: row, what is the cross axis?

- A. Horizontal
- B. Vertical
- C. Both
- D. None

Answer: B

12. In flex-direction: column, what is the cross axis?

- A. Horizontal
- B. Vertical
- C. Both
- D. None

Answer: A

13. Which property primarily controls alignment along the main axis?

- A. align-items
- B. justify-content
- C. align-content
- D. place-items

Answer: B

14. Which property primarily controls alignment along the cross axis?

- A. justify-content
- B. align-items
- C. flex-direction
- D. flex-wrap

Answer: B

Part 3 — justify-content

15. Which property controls the distribution of flex items along the main axis?

- A. align-items
- B. justify-content
- C. flex-align
- D. justify-items

Answer: B

16. What does justify-content: center do?

- A. Centers items vertically always
- B. Centers items horizontally always
- C. Centers items along the main axis
- D. Centers the container

Answer: C

Explanation: justify-content follows the main axis, so it is not always horizontal.

17. Which value places items at the beginning of the main axis?

- A. center
- B. flex-start
- C. start-center
- D. top

Answer: B

18. Which value places items at the end of the main axis?

- A. flex-end
- B. end-flex
- C. bottom
- D. right

Answer: A

19. Which value places equal space between items but not necessarily at the edges?

- A. space-around
- B. space-evenly
- C. space-between
- D. center

Answer: C

20. Which value gives equal space between items and also equal space at both edges?

- A. space-between
- B. space-around
- C. space-evenly
- D. stretch

Answer: C

21. Which value gives space around each item?

- A. space-between
- B. space-around
- C. space-evenly
- D. around

Answer: B

22. What happens with justify-content: space-between?

- A. Equal space around every item
- B. Equal space between adjacent items, with items pushed to the edges
- C. Items are centered
- D. Items overlap

Answer: B

Part 4 — align-items

23. Which property aligns flex items along the cross axis?

- A. justify-content
- B. align-items
- C. align-content
- D. cross-align

Answer: B

24. What is the default value of align-items?

- A. center
- B. flex-start
- C. stretch
- D. baseline

Answer: C

25. What does align-items: center do?

- A. Centers items along the main axis
- B. Centers items along the cross axis
- C. Centers the container
- D. Centers text only

Answer: B

26. Which value stretches flex items across the cross axis?

- A. expand
- B. stretch
- C. fill
- D. grow

Answer: B

27. Which property is commonly used together with justify-content to center items on both axes?

- A. align-items
- B. position
- C. float
- D. grid-template

Answer: A

28. Which combination centers items on both axes when flex-direction is row?

- A. justify-content: center; and align-items: center;

- B. justify-items: center; and align-items: center;
- C. align-content: center; and justify-items: center;
- D. flex-align: center;

Answer: A

Part 5 — flex-wrap

29. What is the default value of flex-wrap?

- A. wrap
- B. nowrap
- C. reverse
- D. auto

Answer: B

30. What does flex-wrap: wrap do?

- A. Wraps text
- B. Allows flex items to move onto multiple lines
- C. Wraps the container
- D. Reverses items

Answer: B

31. Which property controls whether flex items wrap?

- A. flex-direction
- B. flex-wrap
- C. flex-line
- D. wrap-items

Answer: B

32. What does wrap-reverse do?

- A. Prevents wrapping
- B. Wraps items in reverse cross-axis direction
- C. Reverses item order
- D. Reverses the main axis

Answer: B

Part 6 — gap

33. Which property creates space between flex items?

- A. spacing
- B. gap
- C. item-gap
- D. space

Answer: B

34. Is gap: 20px valid on a flex container?

- A. Yes
- B. No
- C. Only with Grid
- D. Only with position

Answer: A

35. Which properties can specify row and column gaps separately?

- A. row-gap and column-gap
- B. flex-row-gap and flex-column-gap
- C. horizontal-gap and vertical-gap
- D. item-row and item-column

Answer: A

Part 10 — Flexbox Conceptual / Tricky Questions

36. Flexbox is primarily designed for:

- A. One-dimensional layouts
- B. Two-dimensional layouts
- C. Database layouts
- D. Image editing

Answer: A

37. Grid is primarily designed for:

- A. One-dimensional layouts
- B. Two-dimensional layouts
- C. Animations
- D. Text formatting

Answer: B

38. Which is generally better suited for a navigation bar?

- A. Flexbox
- B. Grid only
- C. Table
- D. Float only

Answer: A

39. Which is generally better suited for a complete page layout with rows and columns?

- A. Flexbox
- B. Grid
- C. Inline
- D. Float

Answer: B

40. Can Flexbox and Grid be used together?

- A. No
- B. Yes
- C. Only in React
- D. Only with JavaScript

Answer: B

Explanation: A Grid item can itself be a flex container, and a flex item can itself be a grid container.

Part 20 — Code-Based / Tricky Review

41. If flex-direction is column, what axis does justify-content control?

- A. Horizontal/cross axis
- B. Vertical/main axis
- C. Both equally
- D. Neither

Answer: B

42. If flex-direction is column, what axis does align-items control?

- A. Horizontal/cross axis
- B. Vertical/main axis
- C. Both equally
- D. Neither

Answer: A

43. Which statement is correct?

- A. justify-content is always horizontal
- B. align-items is always vertical
- C. justify-content follows the main axis
- D. flex-direction does not affect alignment axes

Answer: C

44. Which combination is most appropriate for centering a row-direction flex layout on both axes?

- A. justify-content: center; align-items: center;
- B. justify-items: center; align-content: center;
- C. position: center;
- D. text-align: center; only

Answer: A

45. Which statement about Flexbox and Grid is correct?

- A. They cannot be nested
- B. Flexbox is mainly one-dimensional and Grid mainly two-dimensional
- C. Grid can only make columns
- D. Flexbox can only make rows

Answer: B
